Roller System 32® Side Control
Fitting & Operating Instructions

Roller System 32® Side Control
Fitting & Operating Instructions

Carefully unwrap the roller blind and its associated brackets.

The brackets are universal and can be fixed in a top, face fix position.

Note – System 32® has two differing brackets, an idle end and a control end that should be installed for the operation of the blind.

(shown in top fix position)

Idle end bracket   Control end bracket
Fitting the brackets.

To work out the distance required between each bracket you will need to first measure the fabric width, e.g 1500mm.

Add to this an allowance for the control and idle end of 35mm, e.g = 1535mm.

1535mm would be the measurement from the outside of one bracket to the outside of the other bracket.

Distance between outside edge of the brackets =
e.g 1500mm + 35mm = 1535mm

Control end —   — Idle end

Fabric Width = e.g 1500mm
Use this figure to position the outside of your brackets accordingly whether inside of the recess or outside of the recess

1535mm   1535mm

Inside the recess   Outside the recess

Mark the hole positions before drilling and plugging if necessary. Use two screws in each bracket ensuring that the brackets are level. Remember to allow room for the blind to clear any obstacles when deployed, e.g. door or window handles.

Fitting the blind.

Once the brackets have been fitted the blind can be inserted into the brackets.

Note – For conventional roller blinds the fabric comes down from the back of the blind and for reverse roll blinds the fabric hangs from the front of the blind.

With the fabric rolled around the tube, offer the idle end (the end with the pin to the idle end bracket.
With the idle end in place offer the control end to the opposite bracket and secure the blind in place ensuring that the centre lug has dropped into the slot on the bracket.

Child Safety

Your blind will be supplied with either Easybreak® connectors attached to the operating chain or a cord tidy that will need to be fitted to the wall.

Easybreak® System

Two Easybreak® connectors are connected to the operating chain 200mm apart. This ensures that at least one of them will be in the vertical position ensuring they perform as required.

If excessive weight is applied within the loop an Easybreak® connector will break apart.

If an Easybreak® connector comes apart then it will need to be re-connected. To re-connect, check the Easybreak® connector for damage. If undamaged, re-connect the chain by inserting the last ball on the end of the chain into the larger hole of the connector and push it into place.
Easybreak® Connector

200mm apart
Tensioned System using cord tidy.

If the blind is fitted with a continuous loop chain then a cord tidy will be attached to the chain. This must be fitted to the wall as follows:

Fitting a side fix cord tidy.

The cord tidy is a two piece device and will arrive with a disposable red tab fitted to it.
Cord tidy

Disposable red tab

Remove the disposable red tab by disengaging it from the chain and then pull out the disposable red tab.

Disposable retaining thrust washer

Disposable red tab
Position the cord tidy to the wall at the furthest distance below the roller tube adding appropriate tension to the chain and mark its location.
Split the cord tidy and mark the remaining offset hole position
before drilling and plugging both location holes if necessary.
Screw into the offset hole to fix the back piece of the cord tidy to the wall.

Re-assemble the cord tidy with the chain and fix it in previously marked position
with a screw through the centre hole.

Push fit a cover cap over the screw hole opening.

Children can strangle if this safety device is not installed and adjusted. Read carefully the instructions and install accordingly.
LOUVOLITE

Cover cap

Fitting a face fix cord tidy.

Position the face fix cord tidy to the wall at the furthest distance below the headrail adding appropriate tension to the chain and mark its location.
Mark the remaining hole position before drilling and plugging both location holes if necessary.

Attach the cord cover plate with the screw provided.

Push fit a cover cap over the screw hole opening.

Cover cap x 3
Operating the blind.

For a conventional roller blind, in order to lower the blind, pull the rearmost length of chain downwards with a smooth and steady pressure. To roll the blind up do the same on the front length of chain.

For a reverse roll blind the opposite is true, to lower use the front chain and to raise, use the rear chain.

NOTE TO INSTALLER:
Please ensure a general child safety warning tag is fitted on the product.

Notes

# Child Safety - BS EN 13120 Guidelines for Roller Blinds

Tensioned System with Cord Tidy

Roller Blind

Blind drop size

1 Chain length

3 Cord tidy

Fixing height

2 Distance between chain & floor

Floor

❶ If fixing height is unknown
- Blind drop ≤ 2.5 metres, the chain length must be ≤ 1 metre.

- Blind drop > 2.5 metres, the chain length must be drop of blind minus 1.5 metres.

❷ If fixing height known
All blind drop sizes, distance between floor and bottom of chain must be greater than 1.5 metres.

❸ Cord tidy
Affix a cord tidy to the wall at the maximum distance possible from the blind control mechanism ensuring all operating cords are taut (chain no more than 50mm apart at entry/exit of cord tidy).

Breakaway Connector System

Roller Blind

Blind drop size

1 max 2/3 blind drop

3 Chain with 2 x Easybreak connectors spaced 200mm apart

Fixing height

2 Distance between chain & floor

Floor

❶ If fixing height unknown
- Blind drop ≤ 2.5 metres, the chain length must be max 2/3 blind drop.

- Blind drop > 2.5 metres, the chain length must be max 2/3 blind drop.

❷ If fixing height known
All blind drop sizes, distance between floor and bottom of chain must be greater than 0.6 metres.

❸ Chain must be fitted with 2 x Easybreak connectors 200mm apart
Will break apart when excessive force is exerted on the chain.

NOTE TO INSTALLER: Please ensure general child safety warning tag is fitted on the product.

WARNING
Young children can be strangled by loops in pull cords, chains, tapes and inner cords that operate the product.

To avoid strangulation and entanglement, keep cords out of the reach of young children. Cords may become wrapped around a child's neck. Move beds, cots and furniture away from window covering cords.

Do not tie cords together. Make sure cords do not twist and create a loop.
